all your daily communications

TIME IS MONEY AND UC DELIVERS TIME!

Unified Communications will provide you the ability to *stay connected* while you're mobile or out of the office. The ability to remain connected will actually provide you with more TIME, and the freedom to choose how to spend the additional time saved. You may spend more time with family or furthering your career. Either way, the revolution in telecommunications is going to change the way we live and work. As our productivity increases when absent from the office (now a place we're not obliged to physically be in order to work efficiently), we will be presented with the opportunity to have more TIME to do MORE things. Unified Communications will allow callers to connect with you in real-time, whether they call your office number or your direct line. Respond to messages as they come in, either on your smart device or by using Unified Messaging. By connecting more often, you can deal with more things in real-time, and not have work piled up when you get into the office. Imagine adding just 5 minutes to each employee per day, for a company of 100 employees, that's 500 minutes per day or 8.3 hours. That is one extra employee for free. In sum, the real payoff is significantly greater than 5 minutes per day.

Unified Communications can be deployed on both legacy and next generation VoIP systems. In both cases, there will be productivity improvements. In a VoIP environment, voice-enabling office applications will result in a greater addition of time. Having your systems automatically provide voice transactions to their users will speed up the process of providing information. This will give you more time, and again time is money!
